

# HDC-11

## HDMI Conditioner

There's a lot more going on inside this little device than a quick glance will indicate! Our HDMI Conditioner is designed to stabilize and correct HDMI signals that may have been compromised by non-conforming HDMI devices. Many HDMI products may not present a signal with correct EDID, "handshake", or HDCP protocols. As a result, you may experience intermittent or unsatisfactory display. We recognize that and solve most of these issues by establishing a proper "handshake" at the input to this device (with your source) so that your display will operate reliably.

This Conditioner supports ARC (Audio Return Channel) and HEC (Home Ethernet Connection). The HDC-11 supports 3D, 2K x 4K, Deep Color, xV Color, and High Speed transmissions, as well as all current HDMI Audio Formats. It is powered by an included 5V Power Supply. In addition, we provide a USB port for future firmware updates.

# HDC-11

## HDMI Conditioner

Stabilizes and  
Corrects HDMI

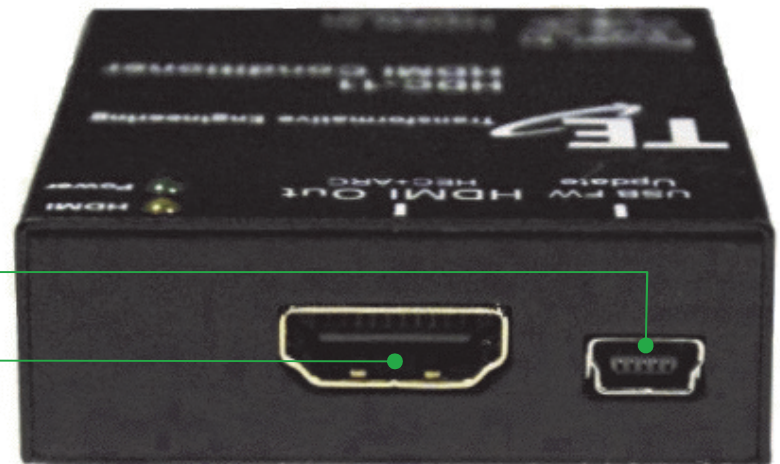

1. HDMI input

2. Power input

3. USB FW update port

4. HDMI output

### HDC-11 Specifications:

INPUT:	HDMI (1)
OUTPUT:	HDMI (1)
	ARC, HEC, Stabilization Circuit – 3D, 2Kx4K, Hi Speed, xV Color
POWER IN:	5V DC, .5A Power Supply included
CASE STYLE:	Stamped Steel
WARRANTY:	3 Years Parts & Labor
