

OB-2 Omni-Balun

When is less – more? When you can do more with less! With the **Omni-Balun**, you now only need to stock **one SKU** on your trucks or in your warehouse instead of four or five! Our revolutionary Balun converts Analog Video (composite and component) and Analog and Digital Audio into CAT/5 or CAT/6 cable for extended runs of up to 300 feet at 1080i resolution. And it converts them all simultaneously! In addition, we've even included IR-Pass Thru connection on an industry-standard mini-jack!

Now your inventory needs can be reduced and you won't be stuck on a jobsite with the wrong balun. That means less expense, less paperwork, and most important of all, less worry!

What more could you want? How about the highest quality conversion transformers, housed in a shielded, extruded aluminum enclosure? How about integrated wire-tie mounting points? You get all this in one balun for far less \$\$\$ than what you'd normally pay for **any** combination of other baluns, because you'd need multiple models to achieve all of the functions contained within one **Omni-Balun**.

OB-2 Omni-Balun

Take a peek inside the
OMNI-BALUN and look at
the quality and construction.

1. High Quality Transformers

2. Computer-Grade multi-layer
circuit board

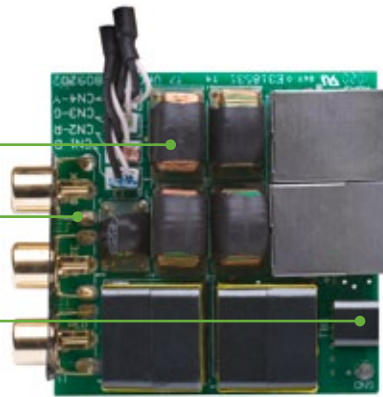

3. Industry-standard IR
mini jack

4. Rugged Shielded aluminum
enclosure

5. Wire-Tie mounting points

6. Rubber surrounds for short-
protection and safety.

7. High Quality CAT5/6
connectors

The bottom line is that our
omni-balun provides you with
much more, for less! Because
of its price, size, performance
and incredible flexibility, it's
simply the best balun available.
